Caden Burnett

Austin, TX | 512-969-8030 | cadenburt7@gmail.com | cadenburnett.com

EDUCATION

Texas A&M University **College Station, Texas**
Bachelor of Science in Industrial and Systems Engineering *Dec 2026*
Minor in Computer Science and Engineering Project Management *GPA : 3.43*
Upper-Level GPA : 3.59

Relevant Coursework: Quality Engineering, Modern Manufacturing Methods for Engineering Design, Engineering Economy, Optimization Modeling, Stochastic Modeling, System Simulation, Production Systems Engineering, Uncertainty Modeling, Human Factors Engineering

PROFESSIONAL EXPERIENCE

The BHW Group **Austin, Texas**
Data and Operations Analyst Internship *May 2025-August 2025*

- Developed an automated Excel VBA system to track and audit employee leave balances across 15 years of data, improving accuracy of workforce planning and reducing manual review time
- Identified misclassified leave categories through SQL analysis, improving accuracy of workforce availability forecasting and reducing scheduling risk
- Met with potential new clients to understand business needs and present company capabilities

Data and Operations Analyst Internship *May 2024-August 2024*

- Created Named Entity Recognition (NER), Clustering, and Merge/Purge scripts to clean vendor and customer datasets using Scikit, Pandas, Python, and SQL
- Analyzed discrepancies between Excel financial datasets using Anomaly Detection, Python, and Postgres

PROJECTS

Texas A&M University **College Station, Texas**
Manufacturing Process & Quality Analysis Project *December 2025*

- Used Minitab and Excel to analyze 20 days of real-world production data from a manufacturing process and conducted a benchmark and capability analysis
- Determined the process was stable with 54.9% of nonconformities stemming from three out of sixty-nine defects
- Recommendations resulted in statistically significant increase in conforming units produced daily

Facility Simulation Project *March 2026*

- Developed Simio model of packing and distribution facility system to analyze throughput, WIP, cycle time, and resource utilization under variability
- Identified bottlenecks via scenario analysis of arrivals, processing, and routing for improvements

Product Development Project *December 2024*

- Conducted real market research to develop customer specifications for a cell phone holder design
- Applied DFM/DFA principles and cost analysis to create product design in SolidWorks

SKILLS, ACTIVITIES & INTERESTS

Technical Skills: Lean, Six Sigma, Data analysis (SQL, VBA, Python, Minitab), Engineering project cost analysis, Production planning, Inventory control, Simulation, CNC Machining, SolidWorks
Activities and Interests: Kappa Sigma, Intramural Soccer, Institute of Industrial and Systems Engineers, Grace Bible Church, Weightlifting, Film
